Regener-Eyes®
Ophthalmic Solution

A NEW REGENERATIVE APPROACH
FOR DRY EYES AND
OCULAR SURFACE DISEASE

Company and Product Overview
Hello, all. Dry eye grabbed my attention in January 2015, and made my life miserable. I am being treated for severe dry eye, with reduced tear retention, reduced lipid layer, and severe Meibomian gland deterioration at the Phoenix Dry Eye Center.

I've tried every OTC eye product carried by the drugstore, compresses, fish oil, blinking exercises, lid scrubs, steroid drops, protective eyewear for daytime and nighttime use, etc. I have used Xiidra, autologous serum eyedrops, and, since December 17, 2016 (2 months ago), a product called Regener-Eyes.

I have exciting news to share. Today Dr. Epstein took photos of my Meibomian glands to compare to the photos from early in December, before treatment with Regener-Eyes began. The side-by-side comparisons demonstrated that some of my Meibomian glands had begun to regenerate! The product is working for me!

Several of you have requested that I update you on my progress with this new treatment. I can report that I'm hopeful. I've seen the evidence in the photos with my own eyes!
